ITEM	DESCRIPTION	QTY	RATE	AMOUNT
rental	Monthly rental of CSM - 2082 with FMI pump and Infra red lamp or resistive ignition as described below: The Jaeger-Baumgartner CSM 2082 as currently configured will allow for puffs at 60, 30, 20 and 15 second intervals (requires multiple pumps, only two port pumps supplied) while operating in the one RPM mode. Puff duration is two seconds with opening and closing times per port being symmetric and consistent with FTC and ISO specifications. Charging and lighting of each cigarette can be done in discontinuous and continuous rotational modes. Ignition of each cigarette can be with gas flame, electrical resistance heating and Infra Red igniters. Ignition can occur with preheating at - 2 seconds (with or without a puff) and at time zero. With additional pumps, in addition to once per minute (60seconds per FTC), inter puff interval as noted above can be as short as 15 seconds (4 puffs per minute), 20 seconds (3 puffs per minute) or 30 seconds (two puffs per minute for Massachusetts and Canadian Intense Regime smoking). Puff volumes can be changed from 35 to 45 to 55 to 70 ml depending on the smoke pump used. The addition of one or more dual chamber (paired-piston) human puff profile pumps will allow each puffing port (up to 7 per rotation) to be puffed for two seconds (more or less as the human puff profile dictates). Use of a CSM controlled and programmed FMI type dual piston	3.00	21,500.00	64,500.00

ITEM	DESCRIPTION	QTY	RATE	AMOUNT
	pump (horizontally opposed) will allow a symmetrical bell shaped puff to be taken once (one pump) or twice (two pumps) per rotation. The JB CSM-2082 is the most flexible cigarette smoking machine available today and traces its history to the Coggins-Baumgartner and AMESA smoking machines that were originally developed by Battelle Geneva for use in tobacco smoke research.
